Softalia

The rejuvenating sandalwood oil

Softalia is extracted from the nuts of *Santalum spicatum*, cultivated in Australia. The sustainable plantations regulate the salinity of the soil modified by the intensive culture of wheat in this area. Softalia is obtained by CO₂ extraction of the nuts and is a natural source of Ximenynic acid, an unusual triple bond fatty acid with specific activities on the skin.

Consumer test

36 volunteers applied a cream with 5% Softalia during 90 days.

Face

Neck

Hands

Softalia visibly improves the skin condition based on daily application in a cream.

Consumer evaluation

210 women volunteers with a dry skin, aged 45 years old and more apply an hand cream with 2% Softalia or a placebo cream during 8 days.

Softalia significantly improves micro-relief and adds sensorial benefits to cream formulation.

Results are expressed in points of difference between the cream containing Softalia and the placebo cream.
